Executive Summary

This project analyzes retail sales data to evaluate business performance, profitability, customer contribution, sales channels, and returns.

The business generated approximately **235.95 million in net revenue** and **29.95 million in estimated gross profit**, with an overall gross margin of **12.69%**.

Tyres generated the highest total profit, while Services had the highest gross margin at **62.98%**. The Retail Store channel generated the highest revenue, while the Online channel had the highest gross margin at **13.42%**.

Customer revenue was concentrated among a small group: the top 10 customers contributed approximately **67.05% of net revenue**. Islamabad recorded the highest return-flagged transaction rate at **5.39%**.

Recommendations

- Review product costs, pricing, and discounts to improve overall margins.
- Investigate the high return rate in Islamabad.
- Maintain relationships with top customers while expanding the customer base.
- Study the performance of high-margin services and the Online channel.
- Monitor monthly sales trends to support inventory and sales planning.

This analysis provides a starting point for better-informed business decisions. The findings should be interpreted in light of the dataset's limitations, particularly the use of estimated costs and transaction-level return flags.
